

Cal OES Daily Situation Report

May 25, 2018

The upcoming holiday weekend will see a large number of boaters on the waterways. A proper fitting life jacket will help protect against problems on the water!

SITUATION SUMMARY

Cal OES Activation Status

State Operations Center	Inland Region EOC	Coastal Region EOC	Southern Region EOC
Normal Operations	Normal Operations	Normal Operations	Normal Operations

Cal OES COASTAL REGION

- Nothing significant to report.

Cal OES INLAND REGION

- Nothing significant to report.

Cal OES SOUTHERN REGION

Virulent Newcastle Disease (VND) in Chickens, Los Angeles and San Bernardino Counties

The California Department of Food and Agriculture (CDFA) has detected virulent Newcastle disease (vND) in chickens in Los Angeles and [San Bernardino Counties](#).

- [CDFA is scaling up their response to this incident as more cases have been detected.](#)
- [The current Incident Command Post \(ICP\) is too small for the current 50 responders and supplies so CDFA has requested assistance in searching for a larger location with adequate storage.](#)
- [CDFA has confirmed that there are no commercial premises currently involved.](#)
- [Cal OES Southern Region will have staff embedded with the CDFA Team on 05/25/18.](#)
- [Cal OES Southern Region is assisting CDFA in identifying a facility to expand operations.](#)

WEATHER SYNOPSIS BY REGION

NORTHERN CALIFORNIA

A Pacific low pressure system will pass over Northern California today with widespread rain and scattered embedded thunderstorms. High temperatures will be 15-20 degrees below normal and S-W winds will gust to 20-30 mph in some areas. The low will move into the Great Basin tonight and a drier NW-N flow pattern will begin move develop in our NW areas tonight as high pressure begins to build in from the west. Showers and thunderstorms will linger in our eastern areas Saturday as a drying and warming trend starts west of the Cascade-Sierra crest.

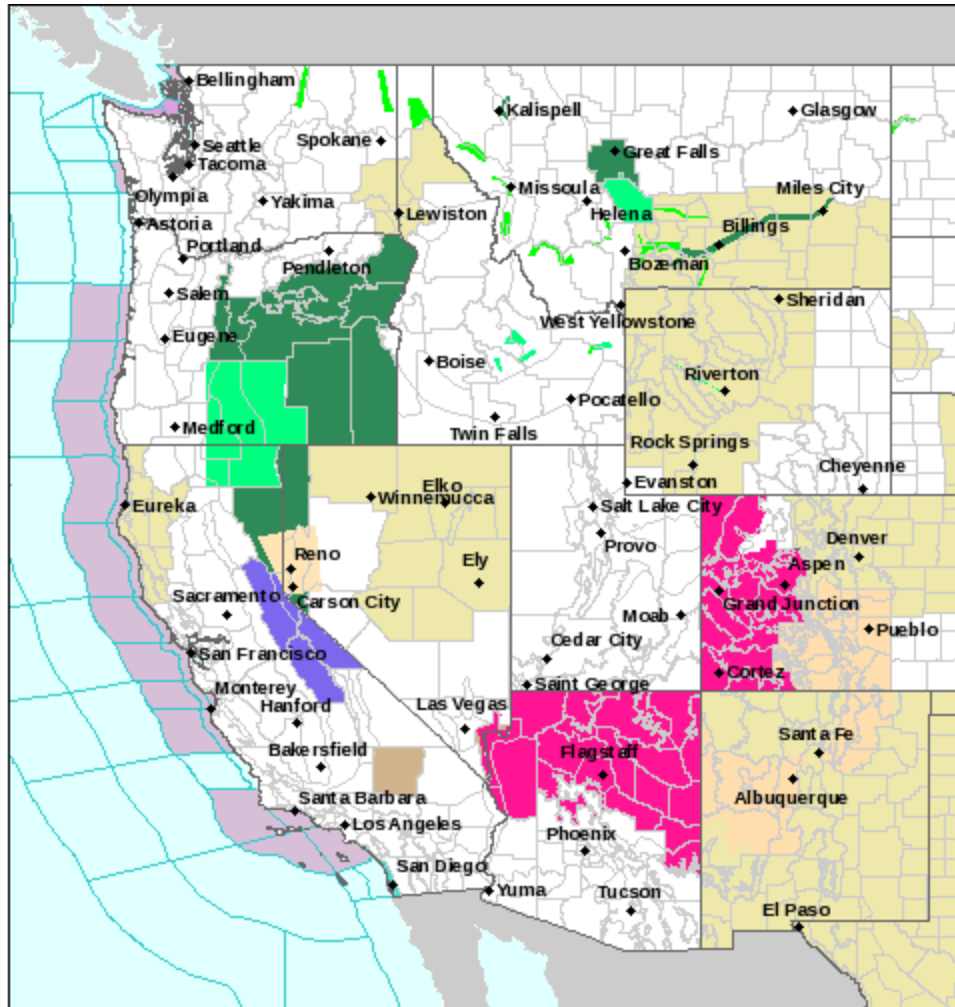

The drying and warming trend will spread east on Sunday. Temperatures will be 5-10 degrees above normal and NW-NE surface winds will gust to 25-30 mph, especially in wind-prone areas in the Sacramento Valley and surrounding foothills. Minimum afternoon relative humidity (RH) readings will be in the teens Sunday. The northerly downslope surface wind pattern will continue through Tuesday morning. Monday will be the peak of the hot and dry weather with temperatures 10-15 degrees above normal and minimum RH of 10-20%. By Tuesday afternoon, conditions will begin to moderate a bit as a weak trough approaches. The trough has the potential to produce near normal temperatures with a return of daily afternoon showers and thunderstorms in the mountains through next Thursday.

SOUTHERN CALIFORNIA

An area of low pressure moving inland over the San Francisco Bay Area will bring scattered showers and thunderstorms from a Monterey/Fresno County line northward through this afternoon. Scattered showers and thunderstorms will continue over the Central and Eastern Sierra through Saturday afternoon as the low moves into Nevada, but the showers and thunderstorms will end across the rest of Central California by this evening. The marine layer will remain deep over Southern California, with areas of light rain in the mornings both today and Saturday. There will be little or no afternoon clearing from the marine layer across Southern California today and Saturday. Westerly winds of 20 to 30 mph with gusts to 50 mph will surface across the wind prone mountain and desert areas through Saturday evening. Temperatures will be well below normal through Saturday, with 50s to low 60s across the mountains and mid 60s to mid 70s in the valleys. The low pressure area will weaken and move off to the northeast as a ridge of high pressure builds in from the southwest bringing a warming and drying trend Sunday through early next week. Temperatures will be near to a little above normal Monday and Tuesday. There will be isolated afternoon showers and thunderstorms over the Central and Eastern Sierra Sunday and then no shower or thunderstorm activity is anticipated across the region Monday. The marine layer will remain deep, but there will be good afternoon clearing Sunday. The marine layer will be much shallower Monday and Tuesday, with morning low clouds and fog expected only over the coastal areas. Winds will be light Sunday through early next week. A Pacific trough will drop down the West Coast bringing significant cooling and an increase in humidity Wednesday through the end of next week. This trough will also bring isolated afternoon showers and thunderstorms to the Sierra Tuesday through Friday. The marine layer will become deep once again, with morning low clouds and fog making it over the lower coastal mountain slopes by Thursday. Westerly afternoon winds of 20 to 30 mph with gusts to 50 mph will once again surface over the wind prone mountain and deserts areas Wednesday through Friday.
